

OpenVPN Desktop Client Setup [Windows vista/7/10]

Add OpenVPN Configuration File to the Desktop Client

Run the OpenVPN Client.

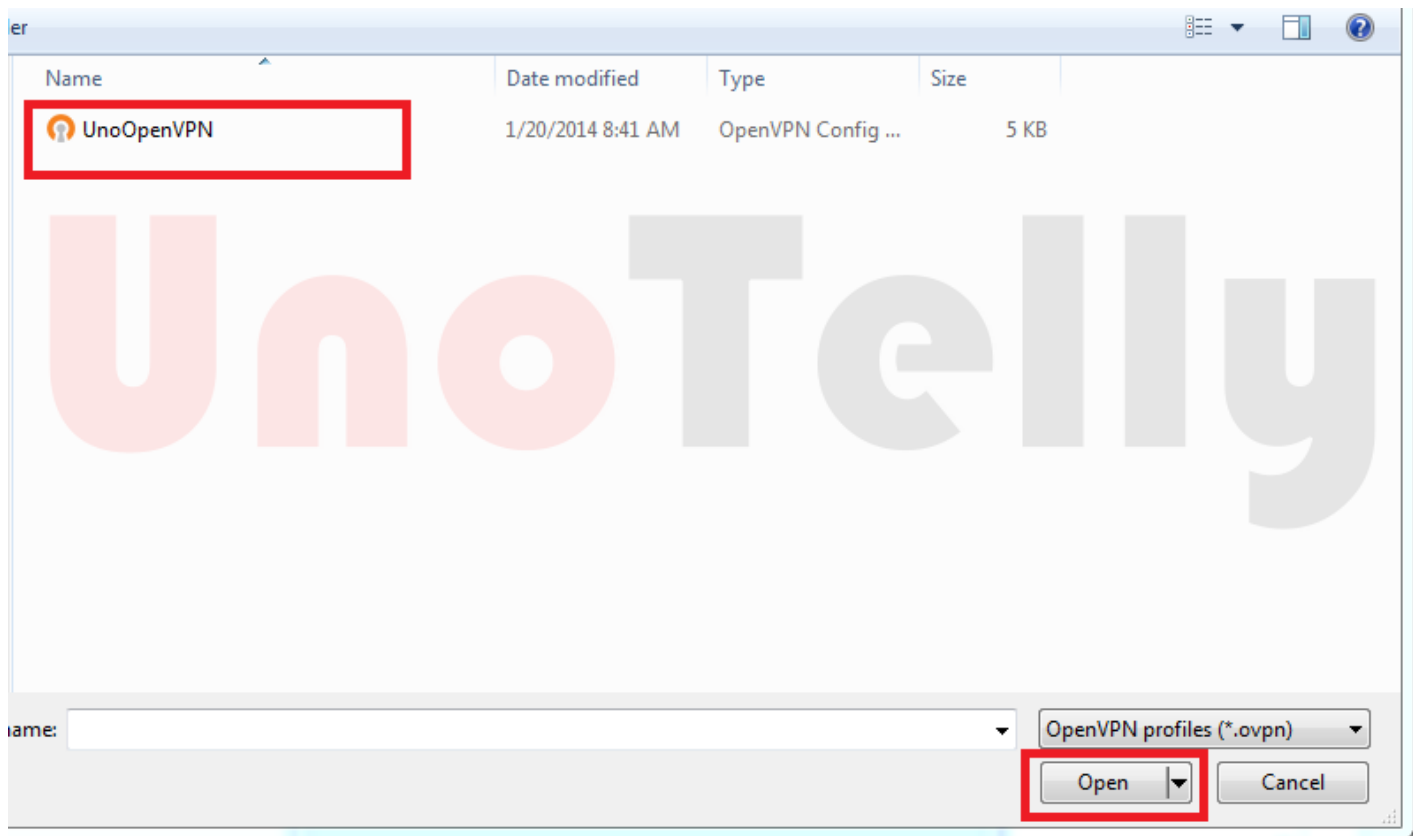

Click on the '+' button to add a new Connection Profile.

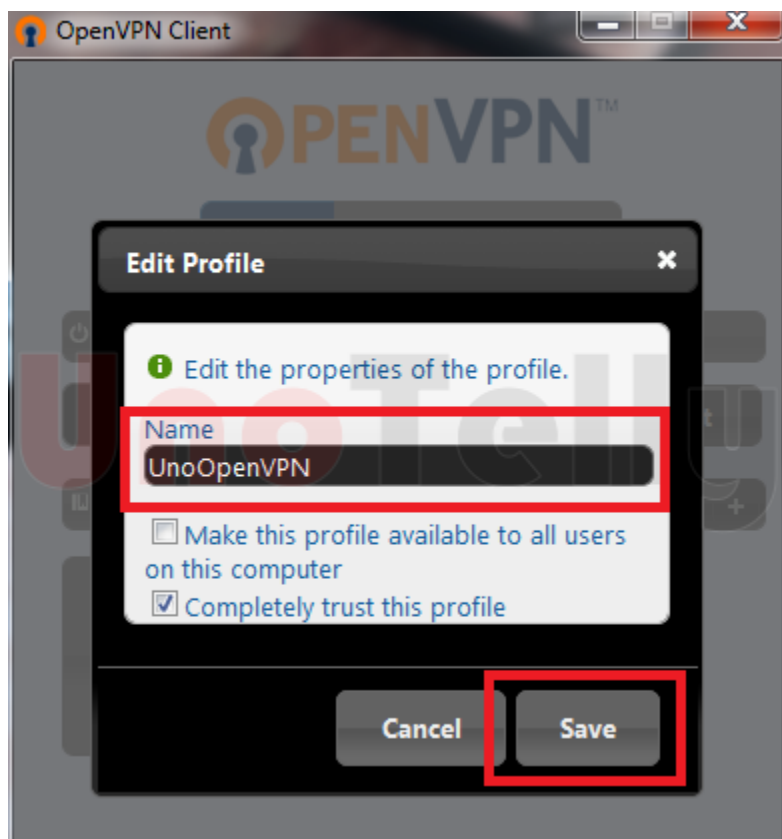

Choose "Local File" and click "Import"

Locate your OpenVPN configuration file and Open it.

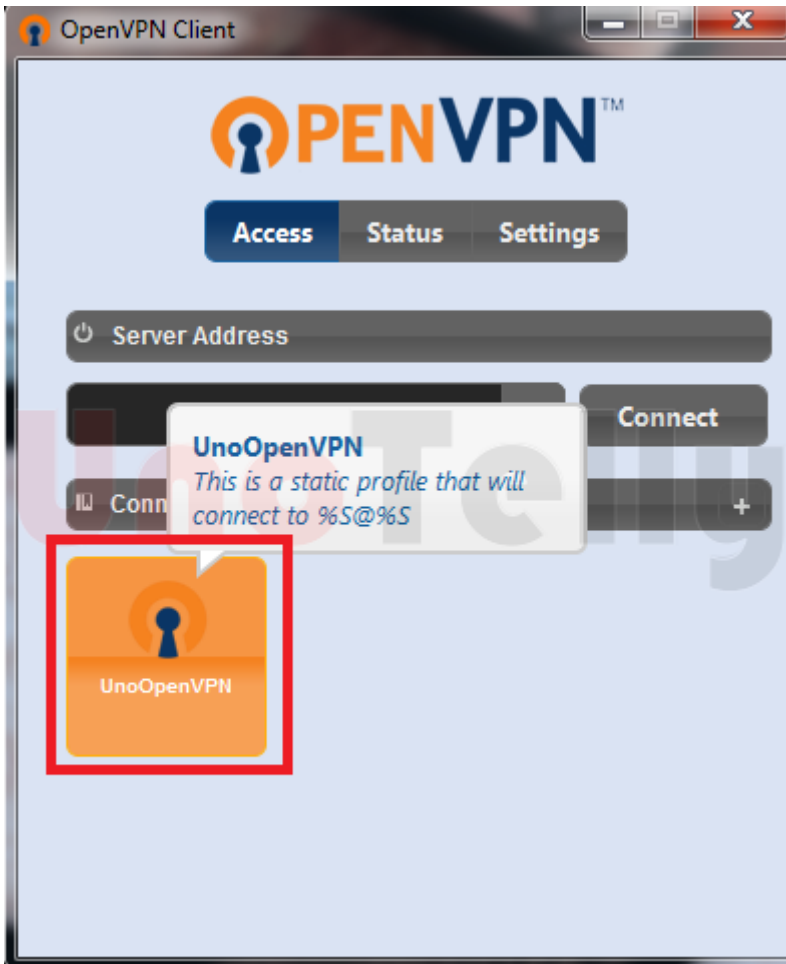

Enter a name for the VPN Profile, or leave it as is and click '**Save**' to add the Profile.

Step 4: Connect to UnoVPN (Your profile name)

Click on the newly created Connection Profile to make a connection to the VPN server.

Upon successful connection, you will a window like below.
